AI Overview

Firebase is **a backend-as-a-service (BaaS) platform by Google that helps developers build web and mobile apps quickly without managing servers**. Key features include **Cloud Firestore** for databases, **Firebase Authentication** for user logins, and **Firebase Hosting** for web deployment. Firebase +3

Core Services

- **Cloud Firestore & Realtime Database**: NoSQL databases that store data and sync updates instantly across all connected user devices.
- **Firebase Authentication**: Ready-to-use secure login system supporting passwords, phone numbers, and major providers like Google or Facebook.
- **Cloud Storage**: Secure space to store user-generated files like profile pictures, photos, and videos.
- **Firebase Hosting**: Fast, secure global hosting for static web files with free SSL certificates.
- **Cloud Functions**: Serverless backend code that runs automatically when triggered by specific app events. Medium +3
